Education

McMaster University Hamilton, ON

Bachelor of Engineering, Software Engineering *Sept. 2023 – Expected May 2028*

- **Honors:** Dean's Honour List, Golden Key Society Member
- **Relevant Coursework:** Applications of Machine Learning, Data Structures & Algorithms, Object-Oriented Programming, CI/CD, Software Requirements, Databases, Concurrency, Large System Design, Software Testing

Technical Skills

Languages: Java, Python, C, Go, R, TypeScript, HTML/CSS/JavaScript, SQL/MySQL, Bash, Verilog
Frameworks & Libraries: React, Node.js, Vert.x, JavaFX, Selenium, REST APIs, Electron, PyTorch, OpenCV
Tools & Technologies: Git/GitHub Actions, CI/CD, Maven, Linux, SQLite, MATLAB, Quartus, AWS, Docker

Experience

Software Developer April 2026 – Aug. 2026

Independent Client (Hostel Operations System) *Toronto, ON*

- Conducted requirements-gathering sessions with the end-client to architect a system tailored to unique business pain points.
- Engineered a local, offline desktop app (React, TypeScript, Electron, SQLite) to manage long-term operations for staff and 1,000+ guests.
- Designed a responsive user interface that reduced management's manual administrative toil by approximately 30 minutes daily.
- Developed an automated shift scheduler for 10-20 employees, tracking hours and payments for streamlined tax calculations.

Software Team Developer Sept. 2024 – Dec. 2024

McMaster Creates *Hamilton, ON*

- Developed web platforms using HTML/CSS/JS and React while providing technical guidance and architecture planning to 100+ members.

Projects

IronMan Gesture Control System | *Python, PyTorch, OpenCV, AWS, Docker* Sept. 2026 – Oct. 2026

- Engineered a real-time computer vision system using PyTorch and OpenCV to map hand gestures from the HaGRID dataset to automated Windows OS actions.
- Designed a scale-to-zero serverless MLOps backend using AWS Lambda and Docker containers, fully automated through GitHub Actions CI/CD pipelines.

Lumina (Hackathon Winning Project) | *Java, JavaFX* Apr. 2023

- Led a 4-person engineering team to develop a 2D game featuring custom-built collision detection and physics systems.
- Secured 1st place out of 150 participants in the DPCDSB Creative Videogame Hackathon by having the most technically impressive project.

IoT Sensor Data Pipeline | *Java, Vert.x, React, REST API, HTML, CSS* Jan. 2026 – Apr. 2026

- Collaborated in a 4-person team to engineer a Vert.x and React IoT weather metric gathering system with a secure REST API to process real-time data.
- Implemented a Bus Pipe and Filter architecture, ensuring high-throughput and reliable data.

Leadership & Extracurriculars

Judge (Programming Division) Aug. 2025

McMaster Engineering Competition *Hamilton, ON*

- Evaluated cybersecurity solutions for a programming competition featuring over 500 total participants.
- Analyzed code efficiency, logic, and design architecture to narrow down the winning team out of 100+ divisional candidates.

Valedictorian June 2023

Philip Pocock Catholic Secondary School *Mississauga, ON*
